Vision systems: High-speed recording solutions STEMMER IMAGING Slow motion is an effect in film-making whereby time appears to be slowed down. Recorded at a rate of 6,200 frames per second. computer software post-processing (with programs like Twixtor) is to fabricate digitally The traditional method for achieving super-slow motion is through high-speed photography, a more Download The Photographic Recording of High Speed Processes . High-speed diagnostic recording has many applications. Very fast processes often need to be seen in slow motion to identify problems On-line systems rely on the interface speed between the camera and the computer and the speed of the Photographic recording of high-speed processes: Amazon.co.uk: A From ENIAC to MSRC [A record of a symposium and celebration].
